

SUMMARY OF FINDINGS

Customer Analysis Summary:

Total Number of Unique Customers

A total of **7,334 unique customers** have placed orders on the platform during the analysis period. This forms the base of our customer behavior and segmentation study.

Repeat vs. One-Time Customers

A healthy **60% of customers(4,402)** have made more than one purchase, indicating **strong repeat engagement** and brand loyalty. However, there is still opportunity to convert the remaining **40% one-time buyers(2,932)** through retention strategies.

Top 10 Customers by Revenue

The top 10 customers generated **significantly high lifetime value**, with each spending between **2,000 and 2,800**, and placing 5 to 7 orders.

Order Analysis Summary:

Total Revenue

The total sales revenue generated across all orders is **38,08,899.19**. This figure serves as a key benchmark for understanding business performance over the observed period.

Order status distribution

Order Status	Number of Orders	Percentage
Pending	5,069	33.8%
Delivered	5,057	33.7%
Shipped	4,874	32.5%

Revenue by Order Status

Pending orders make up the largest share of both order count and revenue, indicating an area for operational optimization.

Delivered orders contribute **~33.7% of revenue**, confirming successful fulfillment aligns with revenue recognition.

There's an opportunity to **accelerate order processing** to convert pending/shipped revenue into realized earnings.

Order Details Report Summary:

Order Overview

Roughly **63% of orders have associated payments**, while **37% remain unpaid**, which could indicate system delays, abandoned checkouts, or incomplete transactions.

Fulfillment vs. Payment Status Crosstab

Each fulfillment status has a substantial share of orders with missing payment records. Specifically, over **5,500 orders lack payment linkage**, highlighting a **gap in transaction completion or data integration**.

Data Quality Observations

The high number of unpaid orders indicates either **transactional drop-offs** or **missing payment data**, which may require further system or process audits.

Payment Analysis Summary:

Payment outcomes are **evenly split**, with about **33% each in completed, failed, and pending** statuses.

A high number of **pending and failed payments (~67%)** suggests challenges in transaction completion.

All three methods show similar volume and value distribution.

PayPal leads slightly in total transaction value.

No payment method stands out as significantly more reliable. However, **failure rates are high across all**, highlighting potential systemic or user experience issues.

Metric	Amount
Revenue Lost to Failed Payments	1,273,618.69
Revenue from Completed Payments	1,257,085.15

Recommendations for Alt Mobility

- 1. Improve Payment Reliability**

Address high failure and pending rates (~67%) through gateway optimization and clearer checkout flows.

- 2. Recover Unpaid Orders**

Investigate 5,500+ unpaid orders to identify root causes (system delays, drop-offs) and close revenue gaps.

- 3. Enhance Order Fulfillment**

Prioritize processing of pending and shipped orders to accelerate revenue realization.

- 4. Boost Customer Retention**

Convert one-time buyers (~40%) with targeted retention campaigns and loyalty incentives.

- 5. Leverage High-Value Customers**

Nurture top spenders through premium service tiers, personalized offers, or referral programs.
